Hay & Grain Feeder

Veterinarians & producers helped design our feeder combining safety & thriftiness. The grain trough is 2" angle iron surrounding 18 ga. sheet metal. A lip at the tough edge prevents grain & leaf from being wasted. The manger is solid 3/8" rod, spaced at either 3" or 4". Minimum height to top is 40", adjustable legs can raise it to 50" & level the feeder on uneven ground. Trough is a minimum of 12" off the ground & 22" wide.
